CONTENTS

**01 THE RESEARCH
PROCESS**

02 THE TOOLS

**03 THE INVESTMENT
LAB**

04 LIVE CODING

01

Some ideas we use at KaxaNuk to turn an idea into a funded strategy — and the tools you can use to do it yourself.

KAXANUK SHARING KNOWLEDGE.

We are an **investment research** and **technology development** firm.

THE PROCESS

Eight stages, from a written hypothesis to a funded strategy.

THE INVESTMENT LAB

Six modules. Data Curator, Refinery and Analyzer, plus Backtest Engine, Portfolio Construction, and Attribution Analysis.

THE BOOTCAMP

Six sessions where you run that process yourself, on your own laptop.

YOU'LL LEAVE WITH A BACKTESTED STRATEGY, **NOT NOTES.**

Every session ends with something in your repo. This one ends with a clean price dataset.

SIX SESSIONS.

01

**KICK-OFF &
PROCESS**

YOU LEAVE
WITH

A clean price dataset
and tools on your own
machine.

02

**INVESTMENT
RESEARCH**

YOU LEAVE
WITH

A written hypothesis
and the evidence
behind it.

03

**FEATURE
ENGINEERING**

YOU LEAVE
WITH

Signals computed
from your own
curated data.

04

**STRATEGY
MODELING**

YOU LEAVE
WITH

Weights, limits and a
rebalancing rule — a
portfolio, not a signal.

05

**BACKTEST &
ATTRIBUTION**

YOU LEAVE
WITH

A performance curve,
and how much of it is
really alpha.

06

**STRATEGY
PITCH**

YOU LEAVE
WITH

Your strategy,
defended in front of
the room.

THE RESEARCH PROCESS

Research is a pipeline, not a
hunch.

EIGHT STEPS. ONE REPO.

Each stage owns its outputs and reads only from the stage above it. **Steps 1–7 are the Lab.** Step 8 is the one that leaves it.

1**BIBLIOTHECA**

What do we believe, and on what evidence?

2**UNIVERSE**

Which securities are investable, point-in-time?

3**DATA**

Curation, refinery, analysis — what can we measure?

4**PORTFOLIO**

How is the book constructed?

5**BACKTEST**

How would it have performed?

6**ATTRIBUTION**

Where do the alpha and the risk come from?

7**PAPER TRADING**

Does it hold up on live data, before real money?

8**PRODUCTION**

Outside the repo. Joins the KN Fund allocation.

BIBLIOTHECA

Write down what you believe about the market, and the evidence behind it.

IN PLAIN WORDS

A literature review with a thesis at the end of it.

IT PRODUCES

A referenced hypothesis, in the repo, dated.

IT PREVENTS

Backtesting a hunch you cannot defend afterwards.

UNIVERSE

Decide which securities were investable, as of every date in the test.

IN PLAIN WORDS

The eligible list, rebuilt for each date rather than today.

IT PRODUCES

A point-in-time membership table with liquidity filters.

IT PREVENTS

Survivorship bias — testing on the winners that survived.

DATA

Pull, clean and check the series you will actually compute on.

IN PLAIN WORDS

Curation, then refinery, then analysis — in that order.

IT PRODUCES

A reproducible dataset written to `Output/`.

IT PREVENTS

Beautiful results that came from broken inputs.

PORTFOLIO

Turn a signal into weights, limits and a rebalancing rule.

IN PLAIN WORDS

How much of what, and how often you change your mind.

IT PRODUCES

A weighting scheme with position and turnover limits.

IT PREVENTS

A good signal in a portfolio nobody could hold.

BACKTEST

Run the rules over history, with costs, without peeking ahead.

IN PLAIN WORDS

The simulation, run by the Backtest Engine.

IT PRODUCES

A performance curve and a cost-aware track record.

IT PREVENTS

Paper returns that real trading would have erased.

ATTRIBUTION

Split the return into known factor exposure and what is left.

IN PLAIN WORDS

Which part of the return did you actually earn?

IT PRODUCES

A factor and idiosyncratic breakdown of performance.

IT PREVENTS

Selling factor beta as if it were alpha.

PAPER TRADING

Run it forward on live data, with no money at risk.

IN PLAIN WORDS

A dress rehearsal on data nobody has seen yet.

IT PRODUCES

Out-of-sample evidence and an operations checklist.

IT PREVENTS

Finding the plumbing problems on day one of funding.

PRODUCTION.

The strategy leaves the repo and joins the KN Fund allocation.

IN PLAIN WORDS

Real capital, real monitoring, a real drawdown policy.

IT PRODUCES

A funded, monitored strategy with an owner.

IT PREVENTS

Research that stays research forever.

THE TOOLS

Three tools. Install once, use for six sessions.

THREE JOBS, YOUR PICK. ■

One tool per column. Either option does the job.

VERSIONS

Where your work lives, and how you get it back after you break it.

GITHUB DESKTOP

`desktop.github.com`

GIT command line

`git-scm.com`

CODE & DEBUG

Your pair for the parts you have not written before. The demo is built live with Claude.

CLAUDE

`claude.ai/download`

CODEX

`openai.com/codex`

READ & RUN

Where you write and run Python. The free editions are enough.

PYCHARM

`jetbrains.com/pycharm`

VS CODE

`code.visualstudio.com`

ONE REPO, THREE JOBS.

The objective is to make it easy to build.

GITHUB

VERSIONS

Every state of your work, recoverable.

PYCHARM

READ & RUN

The editor, the interpreter and the terminal
in one window.

CLAUDE

CODE & DEBUG

Explains errors, drafts code, and never
gets bored of your questions.

THE INVESTMENT LAB

Two ways in: the platform, or the library.

SIX MODULES.

One module per stage of the process. Each reads the previous module's output, so you can enter the pipeline wherever your work already is.

01

DATA CURATOR

Pulls raw market and fundamental data from any provider and aligns it on one calendar.

THIS SESSION'S DEMO

02

DATA REFINERY

Cleans, adjusts and reshapes the curated data into analysis-ready series.

03

DATA ANALYZER

Builds features and tests whether they carry signal, before you model anything.

04

BACKTEST ENGINE

Runs the rules over history with costs and no look-ahead, and returns the track record.

05

PORTFOLIO CONSTRUCTION

Turns a signal into weights, position limits and a rebalancing rule.

06

ATTRIBUTION ANALYSIS

Splits the return into known factor exposure and the part that is actually yours.

THE PLATFORM

NO CODE REQUIRED.

The same pipeline, driven from a workspace instead of a terminal: build a universe, download data, construct a portfolio, run a backtest and attribution — each step tracked to completion.

THE OTHER DOOR IS **PIP INSTALL**

```
pip install kaxanuk.data_curator
```

Open source, public on PyPI, no account and no platform login required.

`github.com/KaxaNuk`

Everything below lives here, public.

`Data-Curator-Use-Cases`

`Backtest-Engine-Use-Cases`

`Attribution-Analysis-Use-Cases`

LIVE CODING

From zero to a clean price
dataset.

WHAT THE DATA CURATOR DOES.

You describe the data you want in a spreadsheet. It fetches, aligns and writes it, the same way every run.

01**YOU CONFIGURE**

Provider, tickers, dates and the columns you want.

02**IT CURATES**

Fetches from the provider, aligns the calendar, handles splits.

03**YOU GET A CSV**

In Output / , reproducible by anyone with your config.

LET THE ASSISTANT INSTALL IT.

PASTE THIS INTO CLAUDE OR CODEX

I want to download market data using Yahoo Finance and KaxaNuk Data Curator, please help me install: https://kaxanuk-data-curator.readthedocs.io/en/latest/user_guide/quick_start.html

It reads the quick-start, checks your Python version, runs the install and creates the project. You answer its questions and watch the terminal.

WHAT IT WILL RUN

```
$ pip install --upgrade pip
$ pip install kaxanuk.data_curator
$ pip install
kaxanuk.data_curator_extensions.yahoo_finance
$ kaxanuk.data_curator init excel
```

WHY YAHOO FINANCE

No API key. Thirty laptops, zero sign-ups.

INIT EXCEL CREATES

Config/data_curator_parameters.xlsx · Config/.env · Output/ ·
__main__.py

If the third command fails, your interpreter is 3.14 — nothing else is version-sensitive.

TO DO.

01 CURATE YOUR OWN TICKERS

Five names you care about, ten years of daily data.

02 COMMIT IT

Push the project to your own GitHub repo, config included.

03 WRITE ONE BELIEF

One paragraph on something you think is true about markets. Session 02 turns it into a hypothesis.

SEE YOU AT THE NEXT SESSION.

Bring the CSV, the repo link and
the belief you wrote down.

QUESTIONS research@kaxanuk.mx

NEXT

SESSION 02

TOPIC

**INVESTMENT
RESEARCH**

YOU LEAVE WITH

**A WAY TO TELL AN IDEA
FROM A BELIEF — AND
THE PAPERS BEHIND IT.**
